

KEE WALKWAY ROLL

Deeply textured walkway rolls for protection of PVC and KEE roof systems

STRONGHOLD™

PRODUCT OVERVIEW & FEATURES

StrongHold's KEE walkway material is manufactured from a proprietary Bitec KEE modified vinyl formulation with UV stable yellow or gray pigment and deep herring bone ribbed texture to improve footing on wet surfaces.

APPLICATION

StrongHold KEE Walkway Rolls are used to provide defined paths to facilitate common rooftop traffic and traffic involved in regular servicing, maintenance and repairs.

StrongHold KEE Walkway Rolls are designed to improve slip resistance, promote positive traction and offer protection from potential damage caused by dropped tools or mishandled equipment.

StrongHold KEE Walkway Rolls are to be maintained in specific areas around roof access points (ladders, hatches, doorways, etc.), around mechanical equipment requiring periodic maintenance and as a walkway system on roof areas subject to frequent foot traffic.

StrongHold KEE Walkway Rolls can easily be cut to various shapes or sizes to facilitate most applications. KEE walkway material is designed to be continuously hot air welded directly to the KEE or PVC Roof membrane.

PHYSICAL PROPERTIES

Thickness	5/32 in (4 cm)
Roll Size	30 in x 50 ft (76 cm x 15.2 m)
Breaking Strength (lbs)	56
Dimensional Stability (%)	-1.6 MD / +.63 XMD
Elongation (%)	205
Tear Strength	NA
Puncture Resistance	NA
